

FENOSAFE - LINER

Rehabilitation of small sewage treatment plants and wastewater collection pits with a liner

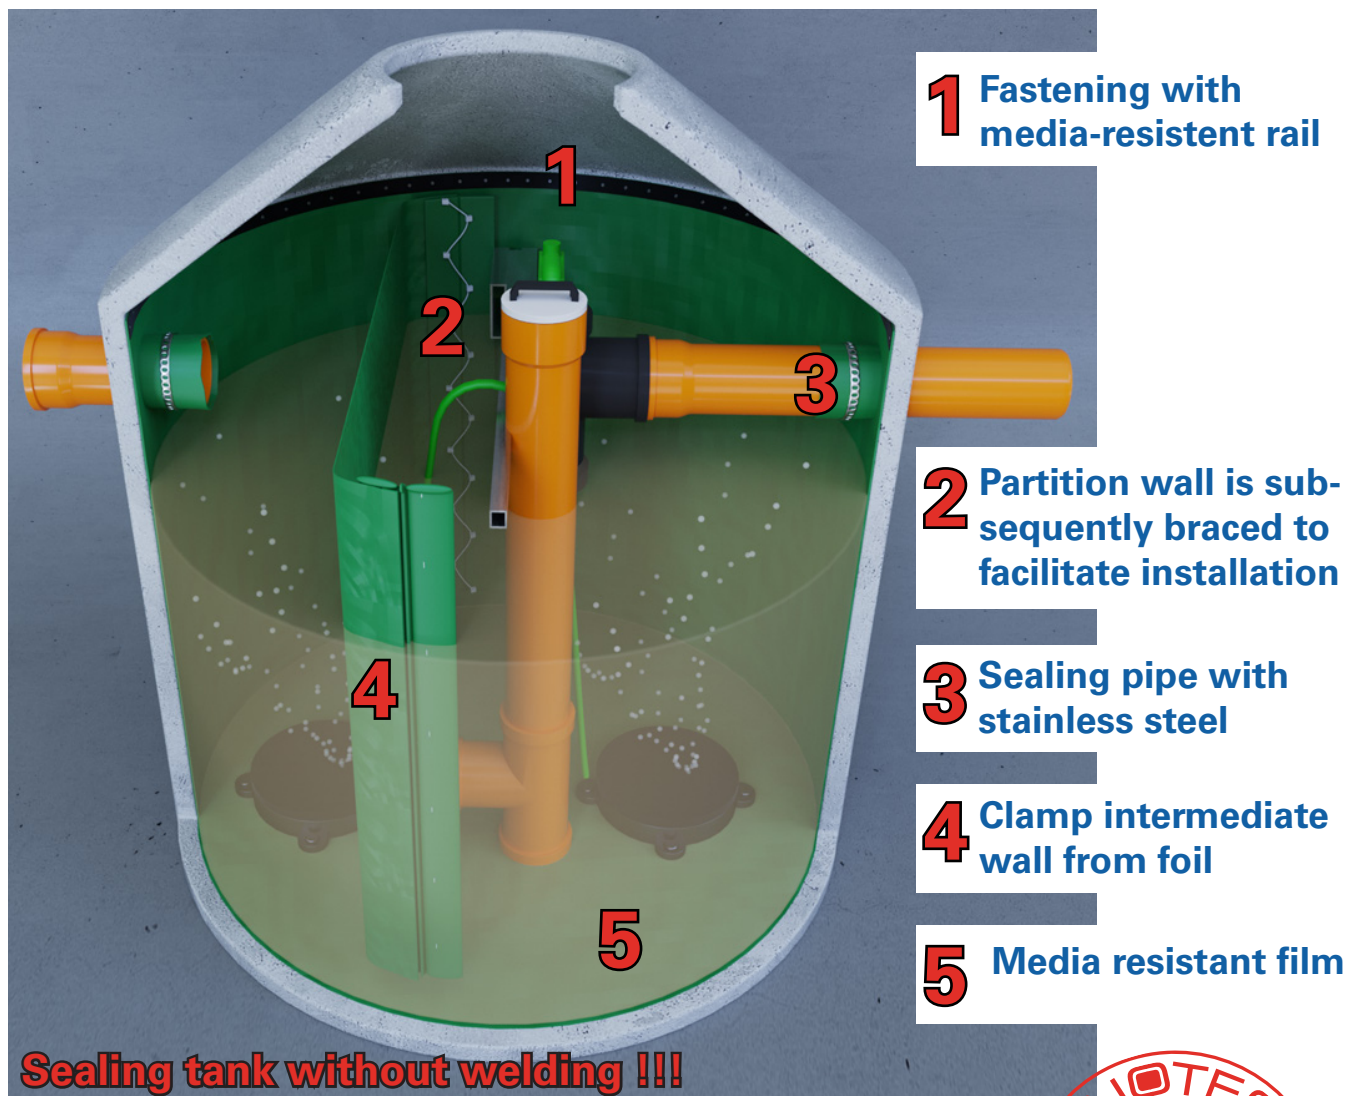

As a result of the increasing number of leaking small sewage treatment plants and wastewater collection pits, we have developed and tested a solution together with a specialist company.

We have over 50 years of experience in the production of linings.

The special, one-millimetre-thick lining and the possible partition wall are manufactured according to the specifications of the specialist company and can be delivered with or without a partition wall in a very assembly-friendly manner.

Approval by the lower water authority is currently still possible as an individual application. It is imperative to wait for the approval. DIBt approval has been applied for.

FENOSAFE Liner

made in Germany by

FENOTECH

The liner is inserted into the leaking container.

Inlets are fixed, sealed and the stainless steel clamp is screwed in place.

After fixing to the inlet, the casing is secured using PE-HD material and stainless steel impact bolts, and in the next work step cut off and sealed over the PE strip.

In the last work step, the possibly necessary partition wall is hung in place.

ADVANTAGES:

- + Cost-effective system for renovation
- + "Fast" installation - possible in one day
- + 100 % tightness is achieved
- + Installation possible without special knowledge
- + Installation of a partition wall without additional expense
- + For all common systems
- + Customized production within 2-3 days
